

# MATH FACTS GAME:

## NUMBER WAR

This game works for all *card sharks* who want to practice addition facts or multiplication facts.

This game is played with a pack of cards. Take out all the picture cards and the Jokers. Divide the deck evenly between the players. Each player places his/her deck **face down**.

Together, players each take the top two cards from their respective decks and lay the two cards **face up**.

Multiply (or add) the two cards. Whichever player has the higher number wins all the cards.

If the answers are the same ... **Number War** is declared. Each player takes three cards from their deck and places the cards **face down** on the table. The players each take two more cards and place these **face up**. Multiply (or add) these cards. The highest number wins **all** the cards played in that hand.
